

**It's Time to Replace FERC with FREC:  
the Federal Renewable Energy Commission**

The Federal Energy Regulatory Commission, FERC, is a rubber stamp agency, FERC has rejected only two applications out of more than 400 proposed natural gas pipelines/infrastructure projects in the last 30 years. Fracking contaminates water, poisons the air and land, leads to earthquakes and leaks methane, which accelerates dangerous climate change.

Donald Trump's Executive Orders last week pushing FERC, EPA and other agencies to override state objections to new pipelines makes this an even more urgent situation.

Beyond Extreme Energy is calling for replacement of FERC with FREC: the Federal Renewable Energy Commission. As part of a Green New Deal, FREC would regulate our nation's electrical grid, prioritize the growth of renewable energy<sup>1</sup>, and reject new gas industry/fossil fuel expansion projects.

RENEWABLE ENERGY FIRST: that must be the mission and method of operating of FREC. It's past time to move to get off fossil fuels!

Please support our campaign by calling Chuck Schumer at 202-224-6542 and Nancy Pelosi at 202-225-4965 to urge them to support legislation to replace FERC with FREC.

For more information go to: <https://FRENotFERC.com>, and <https://beyondextremeenergy.org>.

<sup>1</sup> Renewables do not include trash incineration, natural gas, nuclear or large-scale hydroelectric dams
